

Coding Guidelines

Urethra C680

Primary Site

C680 is the only ICD-O-3 code available for urethra. Assign C680 for penile urethra and for prostatic urethra.

Urothelial carcinoma originates in the urethra, bladder, ureters, and renal pelvis. Code the primary site to urethra (C680) when urothelial carcinoma involves the prostate and the urethra.

First Course of Therapy

Do not code Lupron as treatment for a primary in the prostatic urethra.
